SUMMARY

PMP-certified AI Project Manager with 5+ years of cross-industry delivery experience driving end-to-end execution of AI/ML initiatives, GenAI systems, and enterprise technology programs. Proven track record in stakeholder alignment, sprint execution, risk escalation, roadmap planning, and AI governance across matrixed environments. Hands-on builder of RAG pipelines, LLM evaluation frameworks, agentic workflows, and bias auditing systems — with the technical fluency to collaborate credibly with engineers and translate complex AI capabilities into clear business outcomes. MSBA graduate.

CORE SKILLS

Project & Program Delivery: Agile/Scrum, Sprint Planning, Risk & Issue Tracking, Milestone Management, Roadmap Planning, Resource Allocation, Release Readiness, Kanban

Stakeholder Management: Executive Reporting, Cross-functional Coordination, Escalation Management, Requirements Gathering, Change Management

AI/ML Delivery: Model Evaluation (PR-AUC, ROC-AUC, Lift), LLM Benchmarking, Bias Auditing, RAG Pipelines, Responsible AI, AI Governance, Monitoring & Observability

GenAI & LLM Systems: Embeddings, ChromaDB, Prompt Design, Guardrails/Refusal, Evaluation Harness, Ollama, Agentic Workflows, n8n Orchestration, HITL, Tool Calling

Data & Analytics: Python, SQL, pandas, XGBoost/LightGBM, Feature Engineering, Tableau, Data Storytelling, CRISP-DM

Tools & Platforms: JIRA, Git/GitHub, Docker, FastAPI, REST APIs, GCP Vertex AI, Dialogflow, Next.js, TypeScript, VS Code, Jupyter

CERTIFICATIONS

- **PMP® (Project Management Professional) — Project Management Institute**

PROFESSIONAL EXPERIENCE

AI/ML Project Manager — Saayam For All, San Jose, CA (Remote) Mar 2026 – Present

- Led a comprehensive 33-point platform audit (app, 37 repos, 51-page wiki, MVP board) within weeks of onboarding — delivered a prioritized P0→P2 roadmap with clear ownership mapping, compliance checkpoints, and pre-launch milestones.
- Identified and escalated critical security and compliance risks (PII exposure, GDPR gaps); structured remediation plans aligned to release schedule, coordinating directly with engineering and leadership stakeholders.
- Owned Agile delivery for AI/ML workstreams — drove sprint execution and led benchmarking of a multi-model AI assistant (OpenAI, Gemini, Meta, xAI) across latency, cost, and quality dimensions using a structured evaluation framework.
- Designed and implemented a Kanban task prioritization framework for the AI/ML engineering team — establishing P0–P2 priority tiers, T-shirt sizing estimates (XS–XL), and task status standards to improve sprint visibility, resource allocation, and delivery predictability across concurrent workstreams.

M365 Engineer / Technical PM — Tata Consultancy Services (KPMG), Hyderabad, India Jun 2023 – Dec 2023

- Owned risk tracking and RCA documentation across 58 member firms — maintained ~98% platform availability by coordinating remediation timelines across technical and business stakeholders.
- Designed and maintained executive delivery status reporting — improved blocker visibility and reduced escalation lag across sprint cycles; framework adopted as standard by the delivery team.

Test Engineer / Delivery Coordinator — Wipro (Meta), Hyderabad, India Oct 2021 – Dec 2022

- Owned sprint health tracking across a 12-member Agile team — built dashboards that improved planning accuracy and release readiness, reducing cycle time variability.
- Partnered with engineers and product stakeholders to triage and prioritize defects, reducing delivery friction and improving on-time release rate.

ERC Sr. Associate — Amazon, Hyderabad, India Feb 2021 – Jul 2021

- Delivered frontline HR support with ~95% first-contact resolution rate; drove ~26% improvement in handle time by redesigning call scripts — recognized for measurable process improvement contribution.

IT Analyst — Tech Mahindra, Hyderabad, India Jul 2019 – Oct 2020

- Resolved M365/Azure AD incidents with ~97% resolution rate — redesigned triage and escalation workflows, improving CSAT by ~15%; recognized as Best Employee of the Project three times for sustained delivery quality.

AI & DELIVERY PROJECTS

Bank Telemarketing Propensity Model — ML Delivery | Tech: Python, SQL, XGBoost/LightGBM, SHAP, Tableau

- Led end-to-end delivery of a leakage-free ML call-prioritization system using CRISP-DM — owned stakeholder reporting, rollout plan, and post-deployment monitoring framework.
- Achieved ~49% subscriber capture in top 10% of contacts (~72% top 20%); translated scores into tiered call strategies; estimated ~\$190K campaign cost avoidance through agent capacity reallocation.

LLM Evaluation & Responsible AI Suite | Tech: Python, Ollama, sentence-transformers, VADER, scipy, Streamlit, Gemini API

- Defined and tracked LLM performance metrics across quality, latency, and bias — Llama 3.1 (0.713 quality) vs Mistral (0.662, 26% faster); produced data-driven quality-latency tradeoff recommendation for production deployment.
- Designed demographic bias audit across 3 parity scenarios (gender, ethnicity, name bias) — both models cleared LOW risk threshold; established as responsible AI evaluation standard.
- Ran A/B prompt tests across 2 task types — structured prompting outperformed direct instruction by 25.8% on summarization; published evidence-based prompt design standard.

Local RAG Assistant — GenAI Platform Prototype | Tech: Python, FastAPI, Ollama, ChromaDB, LangChain, Next.js, TypeScript

- Delivered end-to-end RAG pipeline: PDF ingestion → chunking → embeddings → ChromaDB retrieval → LLM response with per-claim citations; defined acceptance criteria and golden-set eval for groundedness and citation coverage.
- Implemented AI governance guardrails: source-only answering, perspective control, and refusal logic when evidence is missing — embedding responsible AI standards into product architecture from day one.

AI PM Ops Copilot — Agentic Workflow / *Tech: n8n, Docker, Ollama, FastAPI, RAG, Prompt Templates*

- Designed and delivered an agentic automation workflow converting job descriptions into requirements JSON, Fit/Gap matrix, and ATS-ready outputs — with RAG-grounded evidence retrieval, guardrails against invented experience, and human-in-the-loop approval.
- Generated downloadable run reports for auditability and repeatability — demonstrating end-to-end AI delivery ownership from ideation through governed deployment.

Aqua 4.0 — AI Product Architecture (Entrepreneurship) / *Tech: Computer Vision, Deep Learning, Mobile UX, Cloud APIs*

- Served as Chief of Tech — led technical feasibility assessment and end-to-end product architecture for a mobile AI system automating shrimp larvae counting and biomass estimation.
- Defined product workflow (scan → AI → report → insights), designed prototype UX, and contributed to market positioning, pricing logic, and pilot rollout strategy for scalable deployment.

Performance & Discount Optimization Dashboard / *Tech: Tableau*

- Identified discount-driven profit leakage and pricing sensitivity patterns through heatmap and time-trend analysis — translated findings into actionable pricing recommendations for business stakeholders.

EDUCATION

M.S., Business Analytics — University of North Texas, Denton, TX

Coursework: AI/ML, Predictive Analytics, Business Statistics, Time-Series, Data Visualization

Jan 2024 – Dec 2025
